Background

Dr. Judith C. Chow, Nazir and Mary Ansari Chair in Entrepreneurialism and Science and Research Professor in the Division of Atmospheric Sciences (DAS) at the Desert Research Institute (DRI; <http://www.dri.edu>), has more than 43 years of experience in atmospheric, air quality, and environmental health research and education. Dr. Chow is a member of the graduate faculty in the Department of Environmental Science and Health and Atmospheric Sciences Program in the Department of Physics at the University of Nevada, Reno (UNR), where she advises graduate students working on Master's and Doctoral degrees. As founder and leader of DRI's Environmental Analysis Facility (EAF), she heads a group of ~30 research scientists and technicians in developing and applying advanced analytical methods to characterize suspended atmospheric particles for source attribution and their effects on health, climate, visibility, ecosystems, and cultural artifacts. Her current strategic priorities include expansion of EAF capabilities to obtain more information from archived samples of existing monitoring networks using thermal and mass spectrometric technologies, improving detection of brown carbon in speciation network samples, applying microsensors to fugitive dust control, and simulating source profile changes using a photochemical flow tube reactor. Recently completed projects include assessment of contributions from seaport operations to adverse air quality in southern California;; measuring real-world emissions in Canada's Oil Sands Region; designing air quality networks in developing countries for the World Bank; and evaluating effects of photochemical aging on biomass burning emissions. She has been principal investigator or a major collaborator on more than 50 large atmospheric studies and many smaller ones. During her career at DRI, Dr. Chow has established cooperative agreements and collaborative research projects with environmental scientists in Hong Kong Special Administrative Region, mainland China, Taiwan, Japan, Korea, India, Canada, Mexico, El Salvador, Chile, New Zealand, Australia, Austria, Germany, Croatia, Italy, South Africa, and Antarctica. Her research leadership crosses traditional university departmental lines – involving chemists, physicists, biologists, engineers, toxicologists, epidemiologists, and physicians. Dr. Chow is the principal author or co-author of more than 580 journal articles, book chapters, and printed conference papers and >240 technical reports. She has been recognized by ISIHighlyCited.com in ecology and environment with more than 20,000 citations of her work an h-index of 77.
